This enables them to understand the structural geology and mineralogy of the samples as well. They are exposed to the utilization of geological maps and various geological tools.
2. **Geomechanics and Strength of Materials Lab:** The objective of this lab course is to make students understand the mechanical properties of rock and its application in upstream hydrocarbon industry. The students analyze the pore structure, compressive and tensile strength ductility, hardness, brittleness, elasticity, fatigue limits of various materials.
3. **Drilling Fluids & Cements Lab:** The objective of this lab course is to make students understand the characteristics of drilling fluid and cementation. They learn about the classification of drilling fluids, properties and nature of drilling fluids, and how to select an effective fluid system.
4. **Safety, Health and Environment Lab:** The objective of this lab course is to give students an exposure on day-to-day Safety, Health and Environmental activities of various segments of hydrocarbon industries.
5. **Petroleum Engineering Lab (PE-1 and PE-2):** To provide students the knowledge about the basic laboratory equipments, methods and procedures used in petroleum upstream business for effective exploration and exploitation. To study principles and methods involved with the production of oil, gas, and water from subsurface reservoirs and the surface processing of oil and gas in the installation like EPS/GGS/GCS etc. To provide practical and hands on knowledge regarding rocks and fluids inside the reservoirs, their physico-chemical properties and well as their flow behavior in subsurface and surface condition: Starting from core plugging machine to every aspect of core analysis with the practical aspect and application of the petro physical parameters of petroleum reservoir rocks are the strengths of the laboratories. Experiments in Core Flooding apparatus help students to learn and visualize the fluid flow system in porous and fracture medium reservoir medium with great detail. Laboratory experiments with Rheometer, Particle size analyser, Tensiometer help the students to learn more about fluid properties in different physico-chemical condition during production. Students learn to design efficient and cost-effective procedures for lifting oil and gas from subsurface reservoirs which includes detailed analysis of crude oil properties by using sophisticated and non-destructive equipments currently employed in oil and gas industries.
6. **Petroleum Product Testing Lab:** Practical classes are based on theory course content of the Petroleum Engineering course. The students test the physical and chemical properties of petroleum and petroleum related products.

Objectives

Communication in all forms is a major challenge in today's multilingual world. Employers are constantly on the lookout for individuals who are excellent in communication & Inter-personal skills. In addition to verbal communication, understanding of non-verbal clues is also highly important. Almost all discussions of Emotional intelligence also emphasize the neglected skills of intra-personal communication. In short, there is a global requirement for competence in Communication.

To enable students to comprehend and use languages efficiently, PDPU has setup multi-media Language Laboratory (Language Lab) set in 2010 sq. Feet spacious room, the Language lab is fully furnished and air-conditioned.

Software

The Language lab at PDPU is a computer-based laboratory with flexibility to conduct laboratory sessions with computers also. The software used in the language lab is developed by Globarena Technologies Private Limited. The software has default 200-hour self-learnable digital program. It also has software for the career lab with default 200-hour program.

2. Kutch offshore gas reserve to figure in DGH investors meet

With an estimated one trillion cubic feet of gas reserves, the Kutch offshore basin being developed by the Oil and Natural Gas Corporation in Gujarat will be one of the hydrocarbon projects that is expected to figure in the day-long “investors meet” being organised by the Directorate General of Hydrocarbons (DGH) at Gandhinagar on Friday.

The conclave that will showcase energy-rich Kutch and Cambay basin of Gujarat, will have representatives and investors from more than 25 oil and gas organisations such as Schlumberger, Shell, Halliburton, Al-Mansoori, Reliance Industries, ONGC, GSPC, Vedanta among others.

“One of the motives behind organising this conference in Gujarat is to sensitise all companies about the feasibility of business opportunity in the state. In the Kutch and Cambay basins, 40 percent of the reserves are yet to be explored,” said Professor S Sundar Manoharan, Director General of Pandit Deendayal Energy University (PDEU), which will host the event along with the state’s energy department.

This helps in making them understand and appreciate broader contexts of other stakeholders, like government agencies, donors and local self-governance institutions, while participating in existing field projects. This helps in the holistic development of a student

and also makes them aware of the harsh climates and adversities they might be facing on the job. The idea behind this program is to develop a sensitized workforce in energy sector who are socially concerned and willing to positively contribute to the society.
