NAVIGATING THE MAZE OF AI CHALLENGES IN THE ENERGY SECTOR: APPLYING 'WHO MOVED MY CHEESE?' LESSONS

Nishtha Bhargava

School of Management, PDEU

ABSTRACT: The book review considered a book titled "Who Moved My Cheese?" by Dr Spencer Johnson, one of the most successful business books ever. The book explains an amazing way to deal with change in your work and in your life with the help of a story of small characters. The author has interpreted the book from the perspective of the energy sector. The author suggests that AI can face hindrances in the energy sector from the perspective of resistance to change, high implementation costs, data quality and security, regulatory hurdles and skill gaps. The reviewer suggests that leaders of the energy sector be open to change and be willing to learn new things, be proactive and identify opportunities to use AI to improve their business, and invest in training and education for their employees so that they can learn about AI and how to use it effectively and create a culture of innovation and experimentation.

Key Insights

- When things go wrong or you don't succeed, you have two choices: wallow in self-pity or take action and find a new way forward.
- · Life doesn't stop for anyone, so it's important to accept change and move on.
- If you don't adapt to change, you'll eventually fall behind.
- Be aware of the changes happening around you so you can adjust your course as needed.
- Change is inevitable, so it's best to embrace it rather than resist it.
- The sooner you let go of the past, the sooner you can start enjoying the present.

Key Learnings For Personal And Professional Growth:

- 1. Versatile Embrace flexibility.
- 2. Agility Foster adaptability.
- 3. Welcome and Foresee Change Embrace and anticipate change.
- 4. Be Alert to New Possibilities Continuously seek fresh opportunities.
- 5. Defeat Hesitation Overcome fear and hesitation.

As this book is helpful in corporate settings because it teaches readers how to deal with change effectively. Change is inevitable in the corporate world, and it can be difficult for employees to cope with, especially when it is unplanned or unexpected. And me being student of energy and infrastructure fascinated me to ponder upon similar change as:

How Ai's Intervention In The Energy Sector Of India Has Impacted?

"As the world moves toward a more sustainable future, the incorporation of artificial intelligence (AI) into renewable energy systems stands out as a potent instrument. Al is helping to boost efficiency, refine forecasting, and elevate

the management of sustainable power generation, making significant strides toward greener and more efficient energy solutions".

But there are instances which AI can face hindrances in the energy sector:

- Resistance to change: Individuals and companies entrenched in conventional practices within the energy sector might hesitate to embrace Al. The prospect of change can evoke discomfort, accompanied by concerns about potential job displacement and uncertainties surrounding the implications of AI for existing roles.
- High Implementation Costs: The implementation of Al systems in the energy sector frequently demands significant investments in technology, infrastructure, and training. Some companies might hesitate to allocate these resources, showing reluctance in this regard.
- Data Quality and Security: Al relies heavily on data. Ensuring high-quality data is available for AI to work effectively can be a challenge. Moreover, with increased use of AI, there may be concerns about data security and privacy.
- · Regulatory Hurdles: AI heavily depends on data, and ensuring the availability of high-quality data for effective Al operation can pose a challenge. Additionally, as Al usage proliferates, there may arise valid concerns about maintaining data security and preserving privacy.
- · Skill gaps: Implementing AI in the energy sector requires a skilled workforce capable of developing, implementing, and maintaining AI systems. A shortage of AI talent can be a significant hindrance.

How The Learnings Of "Who Moved My Cheese?" Relate To Al Intervention In The Energy Sector.

The learnings of "Who Moved My Cheese?" are highly relevant to AI intervention in the energy sector. The energy sector is changing rapidly due to the adoption of AI, and organizations that are not able to adapt to change will be left behind.

Here are a few tips for adapting to AI intervention in the energy sector:

- Be open to change and be willing to learn new things.
- Be proactive and identify opportunities to use AI to improve your business.
- Invest in training and education for your employees so that they can learn about AI and how to use it effectively.
- Create a culture of innovation and experimentation.
- Be willing to fail and learn from your mistakes.

Please prepare your manuscript before submission, using the following guidelines:-

- 1. Format: Article files should be provided in Microsoft Word format.
- 2. **Article Length:** Articles should be within 8000 words in length. This includes all text including references and appendices. An abstract of 80-100 words should be submitted along with the full paper. Please allow about 280 words for each figure or table.
- 3. Article Title: A title of not more than eight words should be provided.
- 4. **Author Details:** All contributing authors' names should be added to the submission, and their names arranged in the correct order for publication. A brief biographical sketch (60-80 words) of the author/s describing current designation and affiliation, specialization, number of books and articles published in refereed journals, and membership on editorial boards and companies, etc.
- 5. **Keywords:** Authors should provide 3-5 appropriate and short keywords in the submission that encapsulate the principal topics of the paper.

6. Article Classifications:

- Research paper: Research paper covers papers which report on any type of research undertaken by the author(s). The research may involve the construction or testing of a model or framework, experimental research on applied energy science and technology, action research, testing of data, market research or surveys, empirical, scientific or clinical research and modeling and simulation on policy framework leading to validation of sustainability.
- Perspectives: Perspectives presents emerging issues and ideas that call for action or rethinking by managers, administrators, and policy makers in organizations.
- Conceptual paper: Conceptual papers will not be based on research but will develop hypotheses. The papers are likely to be discursive and will cover philosophical discussions and comparative studies of others' work and thinking.
- Management Case: Management Case describes a real-life situation faced, a decision or action taken by an individual manager or by an organization at the strategic, functional or operational levels.
- Diagnoses: Diagnoses presents analyses of the management case by academicians and practitioners. The case problems are examined, their causes are analysed, and issues of relevance are discussed. Diagnoses on the economic viability, grid parity and eco-friendliness of conventional and non conventional energy resources.
- Book Reviews: Book Reviews covers reviews of current books on management.
- 7. **References:** References should be complete in all respects, with authors' surnames arranged alphabetically, following conventional citation styles. We request authors to follow the APA Style developed by the American Psychological Association. Please refer to the following resources (or any recent updates) for more information:

American Psychological Association. (2009). Publication manual of the American Psychological Association (6thed.). Washington, DC: Author.

American Psychological Association. (2007). APA style guide to electronic references (PDF). Washington, DC: Author. Available from www.apa.org/books/

In this style, the in-text citation for a journal article appears as follows: Muduli, (2015) concludes that "high performance work system significantly influences organizational performances." The full reference in the list of references will be: Muduli, A. (2015). High Performance Work System, HRD Climate and Organizational Performance: An Empirical Study, European Journal of Training and Development, 39(3), 239-257.

Copyright: Wherever copyrighted material is used, the authors should be accurate in reproduction and obtain permission from copyright holders, if necessary. Articles published in *PDEU Journal of Energy and Management* should not be reproduced or reprinted in any form, either in full or in part, without prior written permission from the Editor.

Proofs Communication regarding editorial changes and proofs for correction will be sent to the first author unless otherwise indicated.

The author/s should send a soft copy of the manuscript in MS Word to the Managing Editor, PDEU Journal of Energy and Management, Pandit Deendayal Energy University, Gujarat, India.
